Why was the haddisk mad at the printer?

Because the printer called its mother FAT32

Lou Creemers
@lovelacecoding

You don't NEED a MacBook.

I often get the question "Everybody on Twitter is using a MacBook. Should I save for a MacBook to get started with coding?"

You can code on Windows, Linux and Mac. Use what you already own or what fits your budget & goals. You'll be fine.

This was the resume that led someone who worked in Gas Stations for over A DECADE to landing my first job as a software developer.

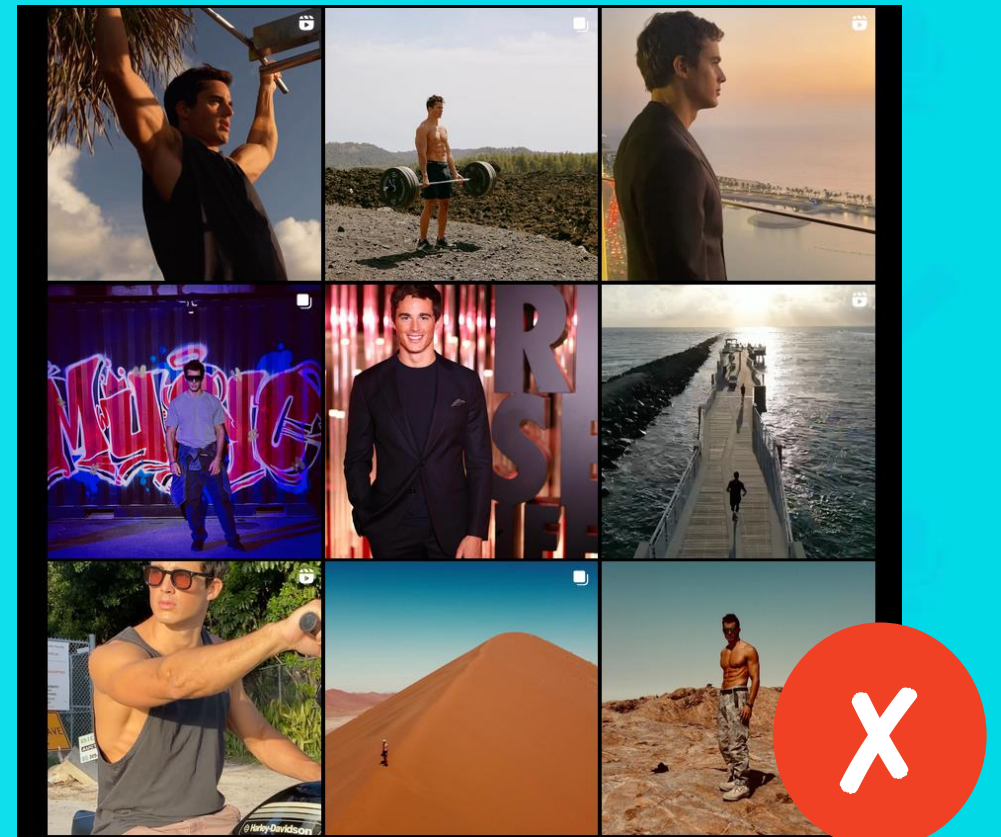

There is one super big pro tip at the end.

Let's break it down and the strategy behind it. There is also room for improvement on this resume but I still believe this one to be great.

Remember one big thing, an interview is a fact finding mission, they only have the information on your LinkedIn and resume to go off of. So giving them very relevant and important information early on can help you set up a better interviewing experience and allow them to take in your relevant information and formulate questions around it. When you withhold information, it makes their job HARDER to do. A big portion of my resume is set up with this in mind.

Summary statement.
Short, sweet and direct. I was applying to larger companies so my focus was highlighting that I had made a project using languages within their stack.

Not only do you not *need* a Mac. No one doing real work uses Mac.

Mac's are for people who call themselves "developer" after learning a web framework

Hey Lou, I really like your profile.
How long have you been coding and
stuff?

Hi hi! I DM'd a few tips I have when describing my impact on my resume that was helpful when I was starting out and really helps me now.

You're doing great! :)

As a junior developer, you need to have projects.

You DO NOT need to:

- cure cancer with code.
- be the first person to solve a specific problem.
- You do not even have to be the best person to deliver that solution.

You just have to be A PERSON that delivers YOUR solution.

This morning I received a confirmation email, that I am a Microsoft Certified Trainer for 2022-2023. 🎉

I am happy to be part of the MCT community for another year. Being a Microsoft Certified Trainer is a great honor and I am proud to be part of this wonderful community. 🥳

I thought it had been a quiet year.
